-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 27 August 2004.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-8, 10-15 and 33-36 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-8, 10-15 and 33-36 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on \_\_\_\_\_ is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

**Priority under 35 U.S.C. §§ 119 and 120**

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

**Attachment(s)**

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449) Paper No(s) \_\_\_\_\_.
- 4) ☐ Interview Summary (PTO-413) Paper No(s). \_\_\_\_\_.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: \_\_\_\_\_.

### **DETAILED ACTION**

This Office Action is in response to amendments and remarks filed August 27, 2004. Claims 1-8, 10-15 and 33-36 are currently pending.

#### ***Claim Objections***

1. Claims 33 and 34 are objected to because of the following informalities:

Claims 33 and 34 are duplicate claims.

Appropriate correction is required.

#### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-4 and 33-36, are rejected under 35 U.S.C. 102(b) as being anticipated by Takenouchi et al. (U.S. Patent 4,177,487).

Regarding claims 1-4 and 33-36, Takenouchi et al. disclose (see Fig. 4) an imaging arrangement adapted to receive two dimensional optical data (images or characters on a document above 25, not shown) represented by at least two beams of electromagnetic radiation (a beam at each of the lenses in 26), the arrangement comprising means for gating and converting (22, 23) the beams into image data, and single electro-optic device (22) comprising a photosensitive surface (27) which surface is arranged to comprise a plurality of independently-gatable portions (27a-n), wherein the independently gatable portions correspond to each of the at least two beams of

electromagnetic radiation, each portion being responsive to an image signal (from 25) and wherein the means for gating and converting is arranged to provide an image of an object (characters on document) to each respective portion of the photosensitive surface. Takenouchi et al. further disclose (see Fig. 4) the device comprises an image intensifier (30, 28, 27), wherein the image intensifier comprises a segmented photocathode (27a-n). Takenouchi et al. also disclose (see Fig. 4) the segmented photocathode comprises a photocathode layer (any one of 27a-n) and a segmented conductive layer or electrode (28a-d) adjacent the photocathode layer for capacitive control.

4. Claims 1, 9, 10, 14, 15, 35 and 36 are rejected under 35 U.S.C. 102(b) as being anticipated by Montpas (U.S. Patent 3,654,475).

Regarding claims 1, 9, 10, 35 and 36, Montpas discloses (see Figs. 1 and 2) an imaging arrangement adapted to receive two dimensional optical data represented by at least two beams of electromagnetic radiation (that is, at least two beams are formed after impinging on 10), the arrangement comprising means for gating and converting (43, 44, 45) the beams into image data, and single electro-optic device comprising a photosensitive surface (45) which surface is arranged to comprise a plurality of independently-gatable portions, wherein the independently gatable portions correspond to each of the at least two beams of electromagnetic radiation, each portion being responsive to an image signal (16) and wherein the means for gating and converting is arranged to provide an image of an object (star) to each respective portion of the

photosensitive surface. Montpas also discloses (see Figs. 1 and 2) means for splitting (10) an incident beam into the at least two beams as claimed.

Regarding claims 14 and 15, Montpas discloses (see Figs. 1 and 2) an imaging arrangement and method for two dimensional optical data represented by an incident beam of electromagnetic radiation, comprising: means for splitting (10) the incident radiation (16) into a plurality of beams (not labeled, beams created after impinging on 10; see column 2, line 48); means for gating (43, 44) and converting (45) the beams into image data; wherein the means for gating and converting the beam into image data includes a single electro-optic device having independently-gated portions (45) corresponding to each of the plurality of beams, each beam corresponding to an image of an object.

5. Claims 1, 5, 6, 35 and 36 are rejected under 35 U.S.C. 102(b) as being anticipated by Bosserman et al. (U.S. Patent 4,024,391).

Regarding claims 1, 5, 6, 35 and 36, Bosserman et al. disclose (see Figs. 1 and 6) an imaging arrangement adapted to receive two dimensional optical data represented by at least two beams of electromagnetic radiation, the arrangement comprising means for gating and converting (40, 40a, 12) the at least two beams into image data, and electro-optic device (12, 106) comprising: a photosensitive surface (P1-P7) which surface is arranged to comprise a plurality of independently-gatable portions, wherein the independently gatable portions correspond to each of the at least two beams of electromagnetic radiation, each portion being responsive to an image signal and wherein the means for gating and converting is arranged to provide an image of an

object to each respective portion of the photosensitive surface. Bosserman et al. further disclose (see Fig. 5) the device comprises a solid-state imager (106), wherein the solid state imager comprises segmented imaging sections (inherent a detector array).

***Claim Rejections - 35 USC § 103***

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 7 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bosserman et al. in view of the European Patent publication of Riches (EP 0701185, published March 13, 1996).

Regarding claim 7, Bosserman et al. disclose the claimed invention as set forth above. Bosserman et al. do not specifically disclose an erasing means for erasing an image. Riches teaches (see Fig. 5) erasing means (Erase (reset)) for erasing an image in a solid state imager. Thus, Riches recognizes that improved imaging can be accomplished by erasing remnant charges. It would have been obvious to a person of ordinary skill in the art at the time the invention was made to improve detection by resetting or erasing data before further imaging in the solid state imager of Bosserman et al. in view of Riches.

Regarding claim 8, Bosserman et al. disclose the claimed invention as set forth above. Bosserman et al. do not specifically disclose an overwriting means for overwriting an image. Riches teaches (see column 4, lines 5-15) overwriting means (an

optical system with image sensor) for overwriting an image. It would have been obvious to a person of ordinary skill in the art at the time the invention was made to substitute data by overwriting an image in the solid state imager of Bosserman et al. in view of Riches to speed up imaging.

8. Claims 11 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Montpas in view of Dirscherl et al. (U.S. Patent 5,001,348).

Regarding claims 11 and 12, Montpas discloses the claimed invention as set forth above. The gated portions would inherently correspond with each beam since the beams are incident on the portions. Montpas does not specifically disclose chromatic means for splitting each of the plurality of beams into a plurality of differently colored beams. Dirscherl teaches (see Figs. 11 and 12) splitting and chromatic means (12, 14, 15, 16) for splitting beams into a plurality of colored beams (IR, UV) in an image intensifier device (see Fig. 7). Thus, Dirscherl recognize that color discrimination and splitting improves detection. It would have been obvious to a person of ordinary skill in the art at the time the invention was made to provide chromatic means as claimed in the apparatus of Montpas in view of Dirscherl to improve contrast and detection.

9. Claim 13 is rejected under 35 U.S.C. 103(a) as being unpatentable over Montpas in view of Riches.

Regarding claim 13, Montpas discloses the claimed invention as set forth above. Montpas does not specifically disclose means responsive to an event for storing converted image data converted before the event. Riches teaches (see Fig. 5) means responsive to an event (triggering signal) for storing (9-14) converted image data which

was converted before the event. Thus, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to save image data before erasure in the apparatus of Montpas in view Riches to improve detection by storing data for further analysis.

### ***Response to Arguments***

10. Applicant's arguments filed August 27, 2004 have been fully considered but they are not persuasive.

Applicant asserts that the prior art, more specifically Montpas, does not disclose providing an image to each respective portion of the photosensitive surface. Applicant explains that since Montpas divides or "portions" an image beam, only a portion of the image is provided to the respective portion of the photosensitive surface. Examiner disagrees. A "portion" of an image is also an image. For example, if one "portions" an image of an apple into four portions, each of the four portions results in an image of an object (a quadrant of the apple).

Thus, as set forth above, this rejection is proper.

### ***Conclusion***

11. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the

shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

12. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thanh X Luu whose telephone number is (571) 272-2441. The examiner can normally be reached on M-F (6:30-4:00) First Friday off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Porta can be reached on (571) 272-2444. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
